Education

Computer Science Major, Philosophy and Math Minor Expected Graduation: Dec. 2027

Rhodes College | Memphis, TN GPA: 3.98/4.0

Relevant Coursework: Programming (Python, Java, C), Computer Organization, Advanced Algorithms, Operating Systems, Dependent Types, Reinforcement Learning, Computer Networks, Parallel Systems

Technologies: C, C++, Java, Python, CUDA, ARM Assembly, Zephyr, FreeRTOS, Basilisk, Terraform (AWS IaC), C#, Git, GitHub Workflows, PlatformIO, I2C, SPI, UART

Work Experience

Lead Flight Software Researcher Feb. 2026 - Present

PEROVSAT | Memphis, TN

- Designed Zephyr-based multithreaded flight software architecture and SITL testing integration using Basilisk
- Wrote device drivers with dependency injection for efficient Kconfig configuration, development and testing
- Set up sustainable processes for clean code and documentation via PRs, using Jira for task distribution
- Created a mission website to host documentation and recruit students

Junior Software Developer Aug. 2025 - Jan. 2026

eFulfillment Service | Traverse City, MI

- Collaborated in Scrum environment to develop and maintain core warehouse logistics software
- Led development of an AWS Synthetic Canary Terraform Module
    - Streamlines continuous testing across all AWS deployments
- Designed MCP-enabled LLM workflow to automate infrastructure documentation

Software Development Intern May 2025 - Aug. 2025

eFulfillment Service | Traverse City, MI

- Key Project: AI Sales Assistant
    - Integrates with CRM software to provide real-time searches, analysis, and graphing
    - Worked with executives to design and get feedback, programmed modularly for expansion
- AWS Prometheus Module
    - EC2 Instance, scans all ECS services for metrics data

Projects

Gate-Lang - https://github.com/Rhodes-Gate-Lang Apr. 2026

Utilized: C++, ProtoBuf, Compiler Design, PEG Parsing, CMake

Overview: Designed and implemented a Hardware Description Language. Parser and compiler convert .gate files to a GateObject defined in ProtoBuf. Simulator runs compiled GateObjects, and can graph them in Mermaid

Pure Wordle - github.com/Bozrem/pure-wordle Jan. 2026

Utilized: C++, OpenMP, AVX2, GoogleTest, Slurm, Perf Profiling, CMake

Overview: Architected and implemented an optimized, parallelized dynamic-programming Wordle solver in under two weeks. Sharded hashmaps minimize lock contention. Lookup Table and custom std::bitset implementation to enable vectorized operations.
